

Half inner-tent and half floors

When half is enough

Half inner-tent

To provide privacy inside the tent, we have developed a half inner-tent with integrated floor in Comfort grade.

The inner-tent has two fresh air intakes and need not be detached when packing the tent. If you want to remove it, it is easily detached from its quick fastenings. For extra comfort inside the rest of the tent, it can be combined with a half floor or a half fleece floor.

Key features

- Protects against condensation which is especially important for Nordic tipis made of lightweight material
- Creates privacy inside the Nordic tipi
- Provides a weather-protected place for wood, packing and wet shoes outside the inner-tent
- Offers even more reliable protection against insects

Half floor

If the Nordic tipi is used with a half inner-tent and you still want to have a floor on the rest of the living area, we also offer a half floor in Comfort grade. Without an inner-tent, two half floors can be joined together with Velcro to make a whole floor.

To make a fire in the tent, you can fold away the floor by opening the zip in the middle. The zip also makes it possible to remove quarter of the floor to create an uncovered space for dirty shoes, firewood, etc.

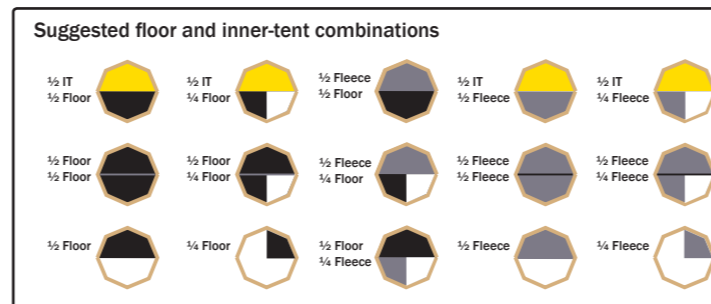

Our half floor can also be combined with a half fleece floor.

Half fleece floor

Our fleece floor has a cosy surface, even for bare skin. It is fully damp-resistant, like all our other floors. You can join two half fleece floors together with Velcro to make a whole floor.

Our half fleece floor can also be combined with a half ordinary floor.

Key features

- Fitted with a zip cover which protects the zip from dirt
- Lies flat and smartly stretched with the help of a tensioning device
- Can be combined with a half inner-tent, a half floor or a half fleece floor

Combine floor halves or quarters and join together with the Velcro.
